We analyzed the records of 24-hour exposure with radiation workers and maintenance workers in an institute of electronic equipment. The mean dose was 0.066 mSv per year and 0.002 mSv per work hour. Maintaining and servicing the equipment were the major exposure factors in the institute. The dose rate of the radiation workers was 0.37 mSv per year. The workers were exposed to an average dose rate of 0.16 mSv per work hour. The cumulative doses were 0.78 mSv for the radiation workers and 1.24 mSv for the maintenance workers. Although the highest radiation doses were found in the servicing of electronic equipment, the doses for the radiation workers and maintenance workers were still low. The cumulative dose for the radiation workers and maintenance workers was low as compared to those of other workers exposed to radiation. SchemeUserState Project 33.
