You can see the recommended settings for your system in the wizard. The recommended settings will ensure the best possible performance of your router. Where possible, all of the settings that are recommended are available in the wizard. In this way, you can easily configure your router without any limitation. The Advanced Settings allow you to configure advanced parameters for your router, such as power supply, interface Ethernet WAN and the maximum upload/download speed, maximum number of users and much more. You can configure your router with or without an external power supply. The state of your router will be displayed. If this state is enabled, the configuration wizard will be disabled and the router will be in 'Setup' state. You can select how often you would like to scan the internet for firmware updates. Each firmware update will be asynchronously scanned on the router's local network. If the scan fails, an error message will be displayed. After that the router will be updated. D-Link DIR-665 Quick Router Setup Troubleshooting Tips: The wizard will automatically perform a scan for firmware updates if your router's firmware version is less than 1.2.16. You can also manually check for updates by pressing the check box 'Check for firmware updates' and then click the 'Check' button. If a check for updates fails, an error message will be displayed.
