Prince of Persia was first announced as a new PlayStation 2 game in July of 2004. Its release was pushed back from its original planned date of 2004 to early 2005, which meant that the game was never launched with an intended audience. In the following year, it was re-announced with a new release window of early 2006. This time, however, Prince of Persia was to be released on the GameCube. This unexpected announcement was met with shock and dismay among PC and PlayStation 2 players, who were disappointed to lose the chance to play the game on their platform. Another delay further postponed the game's release, and

Ubisoft pulled the announcement from the Internet, only to release the game a few months later. Although the game was released for the PlayStation 2 and GameCube, Prince of Persia was the first Prince of Persia title where the actual name was Prince of Persia: The Sands of Time. The Prince has been captured. An evil sorcerer has snared him in his royal prison and now has plans to enslave all of Persia. The only way to free the Prince from his prison is to find the mysterious Time Stones scattered throughout the Sands of Time, an ancient desert where he was sentenced to die. It is up to you to enter the Sands, traverse its sandstorms and face down ferocious new enemies. The Prince has no memory of who he is - only that he is the legendary hero of Persia - and so you must help him unlock his past and gain the courage to rescue his friends from a fate worse than death. Convincing the Prince to fight on is not the only challenge you'll face, as the sorcerer

has granted you a golden mask that, according to legend, will either protect or destroy you. You must solve challenging puzzles, fight ruthless new enemies and battle massive boss enemies as you journey deeper into the Sands. There you will face your destiny. Features: NEW HIGHLIGHTS: - The Far Cry trademarked blend of action and adventure gameplay has finally arrived in Prince of Persia. - The breathtaking graphics and new environments are more detailed and true-to-life, adding to the game's authenticity. - The Prince is now fully voiced, giving the game more depth. - You can now move the Prince by "double-tapping" on the D-Pad, or by moving the analog stick. - The Prince's movement range has been increased and now he can sprint, slide and climb with ease. - The arcade elements from the original game have been revamped and refined c9d1549cdd

Tuesday: art, science and donuts Like many of you, I have been enjoying the "Neptunian Donut Tuesday" created by Dr Chris Russell and his Neptune Today Dining Club. They have been sharing some inspirational art, gorgeous photography and some delicious donuts. Thank you Chris. To get you inspired, I've compiled a montage of their lovely photos and removed a few of my favourites that are still working their way through the editor. All images have been enhanced, but size hasn't been reduced, so some of the prints look quite modest in size: The Hudson Galois Bridge Jupiter Osiris Twinns Delta Pegasi Canis Major William Russell had a little chat with the lucky few who will be at this year's UFO Fest Expo in the UK this weekend, and he has shared some of his comments as we've been preparing to launch our new Space Explorers Portfolio: ~ Hello everyone, I've just had a chat with Holly (Mom) and Serge (Dad) from the Dutch Astronauts Team to tell them all about the launch of

my new dvd-video series Space Explorers. They both seemed really excited and a bit worried about the number of people who are going to see this film and if it would be successful. I've really enjoyed doing it and look forward to the launch. Holly, who's also a member of UAART (the Dutch Astronaut Association) explained that this kind of project is really important to them. It's mainly about citizen scientists visiting the Space program and for them it's amazing because you hear them on the television and then in their own words they explain to you what they have seen, and they're excited as you can imagine! Watching and collecting information from many people is also important, because we want to know what the Space programs are really doing, what they are really aiming for. Scientists and Space Explorers have the same goal. Trying to send an astronaut into space is very expensive, and almost all the money goes back into the Space program. Scientists and Astronauts need funding to study these missions and to design new equipment and missions. Thousands of people, and not just citizens, are working on these funds. The development for tools in space (for example: satellite components,
