

[Download](#)

prior to flashing, you'll need to mount the pi as a hard drive. if you are using an external case (we recommend wooden boxes to protect from physical damage), remove any locks and the pi must be unhooked from the motherboard. the file `asf_loader.bin` must be downloaded to the sd card and flashed (using the `rpi-install-boot/images/ks_rpi_os_full/rpi-install-boot/images/ks_rpi_os_full/asf_loader.bin` file), which you can do using `dd` or `dd if=`. with flashbook catalogs, you can edit ebooks by creating and editing own style catalogs. more catalogs can be designed and inserted as many as you want in each page. it offers you full settings for you to customize your own look flash catalog book. you can select background color (gradient color) or insert background image. when you create a new flash catalog, it will be treated as a new sheet in your existing book, so you don't need to delete existing sheet. this problem occurs because the operating system is unable to start the target executable. first it tries to start it in exe mode and fails. second, it tries to start it in dll mode, which will link with the windows loader. neither of these modes work; no executable can be linked with the system dll. it is recommended to install the physical kindle. the reason is that the flash loader will not install to the virtual kindle and as such you will not be able to use the flash loader if there is no active connection to a kindle, e.g. when the application is not running and the kindle is closed. the device is required to download the physical kindle version of the application.
