As mentioned in the first sentence of the review, the standard review of Photoshop CC is to see what new features it has added. I'll go into the features in some detail in the performance section. In addition, as a professional photographer, I sometimes wish to turn to Photoshop at the end of a shoot, to put a filter on the image after the shoot—something that is impossible to do in my Lightroom editor, for example. I also want to back-up my images, whether to an external hard disk, memory cards, or the Cloud , which I address in that section of the review. This involves using Photoshop to convert to grayscale. This process is covered in a later section of this review. One of the most compelling features of the new Apple Pencil is the new feature that lets you invert the colors of an image. It is easy to see the results, but the coolest effect is achieved when you make multiple strokes in the image, in different directions. For example, you can make a dark line against a light background by drawing in a horizontal stroke from the left, then another stroke that aligns with the first one from the right. Now your image is suddenly dark against a light background. There are also brushes available for drawing circles and squares. The multi-touch interface feels a lot like drawing or painting, and it is quite easy to reproduce works of art. It is still unclear when the updated iPad Pro will be released—it's expected in October—and even whether it will include support for Microsoft's surface pens. But I suspect that the future of Photoshop in the consumer market will revolve around multi-touch; the truth is that I know very few consumers who are still willing to deal with the complexity of controls and settings that can make or break a great image. I look at good images created by the millions of professionals on Photoshop and marvel. There is no reason why we shouldn't be able to match their professional capabilities. It's high time for Adobe to start seriously competing with computers, rather than just treating them as a throw-away processor.
